## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-4, drawn to combining scene layers, classified in class 345, subclass 629.
- II. Claims 5-13 and 18-38, drawn to combining scene layers from independent databases with tree data structure, classified in class 715, subclass 853.
- III. Claims 14-17, drawn to combining scene layers using two-dimensional feature layer and three-dimensional feature model layer, classified in class 345, subclass 419.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention group I has separate utility such as a method for combining scene layers without independent databases with tree data structure, or two-dimensional feature layer and three-dimensional feature model layer. In other words, each one of the inventions recited in groups I, II, and III is separately usable in a system not having the other. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be completed must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).
